RODGERS AND McQUEEN DAMS AND CHANNELS.

The condition of the water from these two sources of our first water supply has been unusually good for the past year. The care taker having kept the grass cut down to the water edge and by continued use of the rake when the water was low has been able to keep down the growth of vegetable matter in the dams and channels..

LITTLE ROUND LAKE.

This little lake supplies our city with the clearest and purest water of any of our various water supplies.

Situate on one of the highest points of the mountain there is very little surface water that gets into the lake. The lake is supplied with never failing springs in the bottom, and while the supply is not a large one, it is one of the best that we have and can always be relied on to furnish good and wholesome water when other sources get very low in times of drouth.

This lake has been full all the season until late in the fall, when the water was drawn down in order to put in a concrete dam. This dam was built by John Wright under the supervision of the Superintendent of Water Works, who received very valuable advice from Commissioner John J. Turner in regard to details and methods of construction of the same.

GLEN WILD RESERVOIR.

During the past season, until September 17, there had been drawn out of this reservoir 2 feet 10 inches of water out of a possible forty-one feet for the city's use. On the above date a twelve-inch valve was opened in order to draw the water all out of the reservoir for the purpose of replacing the forty-six foot swing pipe that had been broken during the season.

This valve was open until February 4th, 1907, the water running continually for four months and four days, at which time it was all drawn out, when the new swing pipe built by J. H. Collins of this city, made from much heavier material and built in a much more substantial manner, was installed.
